

Overview of the How-To documents

- [How to write a How-To](#) (../howto/howto-howto.html) - Provides instructions about writing documents. Please copy this file to serve as a template for your own document.
- [Generate an ASF mirrors page using interactive web form](#) (../howto/howto-asf-mirror.html) - Use ihtml (interpreted html) to include html form elements into a forrest-generated html page. For example, this enables building automated download mirror pages for ASF project websites.
- [How to create a PDF document for each tab](#) (../howto/howto-pdf-tab.html) - Describes the generation of a PDF document for each group of documents that is defined by a tab.
- [How to modify the color of generated corner images](#) (../howto/howto-corner-images.html) - Describes the use of CSS values from the skinconf.xml configuration file to change the color of the corner images to be suitable for your own skin colors. Advanced use explains editing the *.css too.
