

# Issues for this release

## Table of contents

1 [FOR-470] docs and fresh-site samples for "raw content" need update.....	2
2 [FOR-465] Logging Error: Writing event to closed stream.....	2
3 [FOR-454] add content about major changes for this release.....	2
4 [FOR-391] website docs/site split.....	2
5 [FOR-259] openoffice files can skip sections.....	2
6 [FOR-241] character entities (e.g. ampersand) are expanded again for href or src attributes.....	2
7 [FOR-229] SVG not converted to PNG.....	3
8 [FOR-227] static html site: index.html missing in links.....	3
9 [FOR-145] Make Forrest able to be imported by Ant.....	3

**Note:**

These are the issues for this release that are scheduled in our [issue tracking system](#) (see [all](#) open issues). The listing below is regenerated on each Forrest run.

## 1. [FOR-470] docs and fresh-site samples for "raw content" need update

<http://issues.cocoondev.org/browse/FOR-470>

The documentation about "raw content" describes the method used prior to version 0.7  
<br> so we need to update docs and the fresh-site samples. <br> faq.html and upgrading\_07.html and elsewhere. <br> &nbsp;

## 2. [FOR-465] Logging Error: Writing event to closed stream.

<http://issues.cocoondev.org/browse/FOR-465>

After doing 'forrest' there is a strange error message at the end of Cocoon's run: <br> "Logging Error: Writing event to closed stream.&quot; This happens on every different project that i have tried.

## 3. [FOR-454] add content about major changes for this release

<http://issues.cocoondev.org/browse/FOR-454>

We need notes about the major changes for this release: <br> upgrading\_07.xml <br> announcement-0.7.txt <br> RELEASE-NOTES-0.7.txt

## 4. [FOR-391] website docs/site split

<http://issues.cocoondev.org/browse/FOR-391>

Split our website into a standalone documentation site (which will be maintained per version/branch) and the main version-independent site.

## 5. [FOR-259] openoffice files can skip sections

<http://issues.cocoondev.org/browse/FOR-259>

Create an openoffice file with lines like this: <br> <br> Heading 2 <br> Heading 3 <br> Heading 4  
<br> Heading 9 <br> Heading 2 <br> <br> The last two lines are not translated into sections.

## 6. [FOR-241] character entities (e.g. ampersand) are expanded again for href or src attributes

<http://issues.cocoondev.org/browse/FOR-241>

If I have a url like this inside the XML source: <br> <br> <a  
href="http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?g

<br> <br> validate-xdocs fails because it wants the literal & to be typed out as <br> &amp;amp; instead. So I correct it to become: <br> <br> <a href="http://sourceforge.net/sflogo.php?group\_id=comics-grabber&amp;type=1">http://sourceforge.net/sflogo.p  
<br> <br> However, the generated HTML has the entity resolution UNDONE!: <br> <br> <a href="http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?  
<br> <br> This HTML fails validation as 4.01 transitional. <br> <br> David Crossley adds: <br> There is a demonstration of the problem in the document <br> src/documentation/content/xdocs/docs/dreams.xml <br> The ampersand in the link element text is properly handled but <br> the ampersand in the link href attribute is not.

## 7. [FOR-229] SVG not converted to PNG

<http://issues.cocoondev.org/browse/FOR-229>

See <a href="http://mail-archives.apache.org/eyebrowse/BrowseList?listName=dev@forrest.apache.org&by=thread&fr

## 8. [FOR-227] static html site: index.html missing in links

<http://issues.cocoondev.org/browse/FOR-227>

When creating a static html site (running command &quot;forrest&quot;) <br> links in the document that point to a directory (index.html) <br> are broken when using the site without a server (<a href="file:/// ">file:/// </a>) <br> <br> To fix: add the filename to the links, i.e. <br> create &lt;a href="&quot;../chapter1/index.html&quot;&gt; <br> instead of &lt;a href="&quot;../chapter1/&quot;&gt; <br>

## 9. [FOR-145] Make Forrest able to be imported by Ant

<http://issues.cocoondev.org/browse/FOR-145>

I use an ant build system called antworks, <br> <a href="http://antworks.sourceforge.net/">http://antworks.sourceforge.net/</a> <br> &nbsp;which includes an antlet for forrest. <br> Antlets are included into a projects build file with a ant &lt;import&gt; task. <br> <br> However forrest has many common target names and properties. <br> Please prefix all targets and properties with &quot;forrest.&quot; to support using ant import of the entire forrest.build.xml
