- 4 History.....2
 - 4.1 1.3..... 2

Note:

This requires XXE version 2.5p3 or higher

Note:

This is not a particular endorsement of XXE over other xml editors. It is just that we provide this tool to take advantage of XXE.

[XMLmind XML Editor](#) is a validating XML editor featuring a word processor-like view. We support the Forrest plugin for XXE only, please direct all XXE-related questions to XXE support or mailing lists.

1. Upgrade

1. Delete the `forrest` directory from the XXE application config directory. (e.g. `D:\Program Files\XMLmind_XML_Editor\config`)
 - if you have installed the config in your XXE user directory (see below), this step is not necessary
2. Install normally

2. Install

1. Extract into the XXE application config directory (e.g. `D:\Program Files\XMLmind_XML_Editor\config`)
- OR**
2. Extract into your XXE user directory (e.g. `~/.xxe/addon/config`) (only in version 1.3+ of this config). From version 1.3, this is the recommended installation location, as it permits upgrading XXE without having to reinstall this config

3. Developer Instructions

To build the configuration:

1. Make sure the `FORREST_HOME` environment variable is set
2. Change directory to `forrest/tools/xxe`
3. Run `ant` in this directory

To work directly with the SVN version, check out

<http://svn.apache.org/repos/asf/forrest/trunk/tools/xxe/> into the `forrest` folder in the XXE `config` folder. Run the build there to copy the DTDs

[XXE Custom Configuration Info](#)

4. History

4.1. 1.3

- Fixed a bug that prevented this config to work with XXE 3.x (FOR-720)
- Fixed a bug that prevented correct loading of the common css stylesheet (FOR-581)
- Changed icon references to be installation independent (FOR-581)

- Added a Forrest menu, with more robust table manipulation, and for v2 docs some link traversals (both taken from the XXE XHTML config)
- Added more entries to the Table button (menu) in the Forrest toolbar, replicating the entries in the Forrest menu
- Added a History section to the README and documentation
