Note:

These are the open issues for our upcoming release listed in our [issue tracking system](http://issues.cocoondev.org/jira/secure/BrowseProject.jspa?id=10000) (<http://issues.cocoondev.org/jira/secure/BrowseProject.jspa?id=10000>) (see [all](http://issues.cocoondev.org/jira/secure/IssueNavigator.jspa?pid=10000&resolutionIds=-1&tempMax=1000&reset=true) (<http://issues.cocoondev.org/jira/secure/IssueNavigator.jspa?pid=10000&resolutionIds=-1&tempMax=1000&reset=true>) open issues). The listing below is regenerated on each Forrest run.

1. start script for UNIX bin/forrest should not be bash-specific

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-251>

There are some commands in the bin/forrest script that are specific to the bash shell. On most systems the default /bin/sh is actually bash. However, not so on one significant OS. We should be neutral.
 As a workaround the script has been set to be /bin/bash

2. Tigris *.css need cleanup to remove our local changes

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-247>

We have made some local changes to our copies of the tigris *.css which actually need to go into an over-riding css. Also remove our license notice which was added by accident.

<http://marc.theaimsgroup.com/?l=forrest-dev&m=109169132601758>

3. changing skins and going out in the public view

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-245>

It almost time to change the skin on our public Forrest website.

4. Cannot use Ctrl-C to shutdown demo forrest run with jdk1.3

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-235>

After doing 'forrest run' cannot shutdown the demo with Ctrl-C when running on jdk-1.3 (all is okay with jdk-1.4).

5. SVG not converted to PNG

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-229>

See <http://nagoya.apache.org/eyebrowse/BrowseList?listName=>

Open issues

href='mailto:dev@forrest.apache.org'>dev@forrest.apache.org&by=thread&from=828955

6. All documentation needs review, to be up-to-date with copyless procedure

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-224>

Since the change to copyless there is stacks of documentation that needs to be modified.

7. build target "release-dist" still refers to old dist/shbat/ stuff

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-223>

The "release-dist" target needs to be fixed and tested, since the changes for "copyless".

8. whole-site html and pdf: broken ext links

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-211>

In the the generated site.html all of the external links are broken (i.e. the href attributes are like ... error:#ext:forrest).

9. whole-site html and pdf: broken link faq, broken image links

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-210>

The "fresh-site" build from 'forrest seed site' reports some failures for faq.html and various missing images. Wonder if sitemap issue?

10. Custom sitemap.xmap causes hang

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-202>

If there is a sitemap.xmap file in the "project.content-dir", the build process of a site (target: "site",) will hang with an OutOfMemoryError.

11. local stylesheets for a user project not found

<http://issues.cocoondev.org/jira/ViewIssue.jspa?key=FOR-198>

When a user project defines their own sitemap and stylesheets, then the sitemaps are

over-ridden okay, but their local stylesheets are not found.

12. Use code-names for skins

<http://issues.cocoondev.org/jira//ViewIssue.jspa?key=FOR-181>

We should be using codenames for the skins, so we do not tie them to a site that may change skin over time.

13. Finish off copyless behaviour

<http://issues.cocoondev.org/jira//ViewIssue.jspa?key=FOR-172>

The "true" copyless behaviour is not quite fully implemented.

14. linkrewriting not done for aggregate pages

<http://issues.cocoondev.org/jira//ViewIssue.jspa?key=FOR-147>

site: and ext: links are not rewritten for site.html or site.pdf
