-----------------------------	---

1. listLocations Plugin

This plugin uses lists of locations maintained in a simple xml format and transforms them to documents.

Use URIs of the form **locations.html* (i.e. any URI ending with "locations.html").

The following input produces [this output](#).

```
<?xml version="1.0" encoding="UTF-8"?>
<locations title="Some golf driving ranges">

  <introduction>
    These are some golf driving ranges in Australia.
  </introduction>

  <location>
    <id>pga-show-2005</id>
    <title>The 2005 PGA Golf Show</title>
    <place>
      Gold Coast Convention and Exhibition Centre, Queensland.
    </place>
    <url>http://www.pgaexpo.com.au/</url>
    <notes>
      <note>2005-08-04 to 2005-08-07</note>
    </notes>
  </location>

  <location>
    <id>albert-park</id>
    <title>Albert Park Driving Range</title>
    <place>
      Aughtie Drive, Albert Park. 3004. Victoria.
    </place>
    <url>http://www.golfvictoria.com.au/range.htm</url>
  </location>

  ...
</locations>
```
