6 [FOR-277] investigate use of forrest-0.6-dev as webapp with Tomcat 5	3
7 [FOR-284] link rewriting broken when linking to xml source views which contain site: links	3
8 [FOR-247] Tigris *.css need cleanup to remove our local changes	3
9 [FOR-241] character entities (e.g. ampersand) are expanded again for href or src attributes	3
10 [FOR-232] skin fetching cleanup	3
11 [FOR-209] First level selected tab is not highlighted when containing 2nd level tabs	4
12 [FOR-210] whole-site html and pdf: broken link faq, broken image links	4
13 [FOR-211] whole-site html and pdf: broken ext links	4
14 [FOR-215] site.lucene name colaps with site.html request	4
15 [FOR-201] Common template to add alternate views in docs	4
16 [FOR-203] 2nd level tabs are not selected appropriately	4
17 [FOR-183] New and consistent skin layout	5
18 [FOR-184] Switch to XHTML2	5
19 [FOR-187] Redefine project documentation dirs	5
20 [FOR-157] skin-descriptors comma separated list fails	5
21 [FOR-143] Encoding of HTML files should be configurable	5
22 [FOR-95] indirect linking and anchors	6
23 [FOR-15] supporting xhtml/css (as per validator.w3.org) in project directory tree	6
24 [FOR-536] Patch to enable resources to be resolved via the locationmap	7
25 [FOR-504] Open Document Format Input Plugin	7

Note:

These are the issues for this release that are scheduled in our <u>issue tracking system</u> (see <u>all</u> open issues). The listing below is regenerated on each Forrest run

1. [FOR-144] define new format for skinconf.xml

http://issues.apache.org/jira/browse/FOR-144

We are attempting to define a new extensible skinconf format. Here is one thread where the discussion is happening (there were some other threads leading up to that).

http://marc.theaimsgroup.com/?t=1083157591000

<

2. [FOR-427] Need licensing element in plugins.xml

http://issues.apache.org/jira/browse/FOR-427

Since plugins can be hosted on different sites they can be released under licenses other than the Apache one. We need an element in plugins.xml that records the type of license a plugin is released under. This element should be used by the plugin install process to verify that the user agrees to the terms of that license before download and installation is started.

3. [FOR-490] serve multiple sites on a single Forrest instance

http://issues.apache.org/jira/browse/FOR-490

Nicola Ken Barozzi wrote:

> After that, it would be beneficial to be able to serve

> multiple sites on a single Forrest instance, so that we

> can have other projects join and

> have their site served.

br> This last point (seving multiple " sites" from one Forrest

br> instance) is important even without moving Forrest to a

br> live server (I'm +1 on this).

br> Right now we have various styleguides in Forrest and if

br> I need to run them at once I have to start Forrest/jetty

br> with different ports.

br> (From Thread " [RT] Serving Apache Forrest site from live Forrest"

br> on dev-list. Will add link later.)

4. [FOR-388] Use plugins in-place if src available

http://issues.apache.org/jira/browse/FOR-388

5. [FOR-343] Upgrading Plugins

http://issues.apache.org/jira/browse/FOR-343

Currently when installing a plugin Forrest attempts to install the most suitable version available.

However, it makes no attempt to upgrade plugins when an upgrade becomes available.

when eed a traget in the buildfile that will upgrade an indicated plugin when possible. This can then (optionally) be used when running Forrest to automatically upgrade plugins.

6. [FOR-277] investigate use of forrest-0.6-dev as webapp with Tomcat 5

http://issues.apache.org/jira/browse/FOR-277

Some people report having troubles running Forrest as a webapp under Tomcat. Needs investigation before 0.6 release.

before 0.6 release.

7. [FOR-284] link rewriting broken when linking to xml source views which contain site: links

http://issues.apache.org/jira/browse/FOR-284

When linking to *.xml files (e.g. to demonstrate a source file) then if that file contains "site:" or "ext:" links, then they are reported as broken, e.g. docs/site:dtd-docs

8. [FOR-247] Tigris *.css need cleanup to remove our local changes

http://issues.apache.org/jira/browse/FOR-247

We have made some local changes to our copies of the tigris *.css which actually need to go into an over-riding css. Also remove our license notice which was added by accident.

http://marc.theaimsgroup.com/?l=forrest-dev&m=109169132601758

9. [FOR-241] character entities (e.g. ampersand) are expanded again for href or src attributes

http://issues.apache.org/jira/browse/FOR-241

If I have a url like this inside the XML source:

 http://sourceforge.net/sflogo.php?g

 validate-xdocs fails because it wants the literal & to be typed out as
& typed

instead. So I correct it to become:

 http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php

br> However, the generated HTML has the entity resolution UNDONE!:
 http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php.htmlp.ht

br> This HTML fails validation as 4.01 transitional.

br> David Crossley adds:

 cbr>

There is a demonstration of the problem in the document
br>

src/documentation/content/xdocs/docs/dreams.xml
 The ampersand in the link element text is properly handled but
 the ampersand in the link href attribute is not.

10. [FOR-232] skin fetching cleanup

http://issues.apache.org/jira/browse/FOR-232

Fix skin fetching. It's an ugly combination of XSL and unusual ant tasks. It's also broken in at least one way: you get a malformed URL exception if you try to use a skin that doesn't exist. It should instead just say it doesn't exist.

11. [FOR-209] First level selected tab is not highlighted when containing 2nd level tabs

http://issues.apache.org/jira/browse/FOR-209

When there are two levels of tabs, the selected first level tab does not get highlighted, nor are there any other visual or structural clues as to which first-level tab is active, and which contains the displayed 2nd level tabs.
 This is checked with both the default skin, and with tigris-style.

 try table 1.

12. [FOR-210] whole-site html and pdf: broken link faq, broken image links

http://issues.apache.org/jira/browse/FOR-210

13. [FOR-211] whole-site html and pdf: broken ext links

http://issues.apache.org/jira/browse/FOR-211

In the generated site.html all of the external links are broken (i.e. the href attributes are like ... error:#ext:forrest).

14. [FOR-215] site.lucene name colaps with site.html request

http://issues.apache.org/jira/browse/FOR-215

15. [FOR-201] Common template to add alternate views in docs

http://issues.apache.org/jira/browse/FOR-201

The pdf, xml, etc links should be in the document itself for all skins, and be removed when printing. A common template would make all skins look consistent in this regard.

16. [FOR-203] 2nd level tabs are not selected appropriately

http://issues.apache.org/jira/browse/FOR-203

17. [FOR-183] New and consistent skin layout

http://issues.apache.org/jira/browse/FOR-183

We should redefine the files that go in a skin along with their placement and processing.

18. [FOR-184] Switch to XHTML2

http://issues.apache.org/jira/browse/FOR-184

Switch to using XHTML2 as a base and intermediate format. This means also using RelaxNG validations and will force to write new skins for this format.

19. [FOR-187] Redefine project documentation dirs

http://issues.apache.org/jira/browse/FOR-187

We should finalize all discussions about where to put sources and extensions in the projects.

20. [FOR-157] skin-descriptors comma separated list fails

http://issues.apache.org/jira/browse/FOR-157

The second link does *not* read the url of the skin correctly.

| storest | stores

href="http://www.apache.org/~thorsten/whiteboard/forrestskins/skins.xml">http://www.apache.org/~thorsten/wto
o
br> forrest.skins.descriptors=<a

 'd:/get/skins.xml'>file:///d:/get/skins.xml'>file:///d:/get/skins.xml</br>

21. [FOR-143] Encoding of HTML files should be configurable

http://issues.apache.org/jira/browse/FOR-143

22. [FOR-95] indirect linking and anchors

http://issues.apache.org/jira/browse/FOR-95

I would be nice if Forrest supported anchors with indirect linking. That is, something like this: <link href="site:somepage#someanchor">. (or something similar, like <link href="site:somepage" anchor="someanchor">)
br>
br> If somepage pointed to somepage.html, then the resultant link would be somepage.html#someanchor.
br>
Using the above link currently fails with an "invalid xpath" error since "somepage#someanchor" is not a valid qname.

23. [FOR-15] supporting xhtml/css (as per validator.w3.org) in project directory tree

http://issues.apache.org/jira/browse/FOR-15

In order to use the w3c.org sanity checks on xhtml11 and css2, I need html files to start with:

<?xml version="1.0" encoding="iso-8859-1"?>

&html PUBLIC "-//W3C//DTD XHTML 1.1//EN" "http://www.w3.org/TR/xhtml11/DTD/xhtml11.dtd <html xmlns="<a

24. [FOR-536] Patch to enable resources to be resolved via the locationmap

http://issues.apache.org/jira/browse/FOR-536

Moving over an issue from FOR-200

br>

25. [FOR-504] Open Document Format Input Plugin

http://issues.apache.org/jira/browse/FOR-504

The Open Document Format (as used in OpenOffice.org 2.0) is intended to be an open format that can be used by any office suite. In particular, it's designed to not tie businesses' data to a
br> particular program or version of a program.

br>

br> Although this is the format used in OpenOffice.org 2.0 we should not make this a part of the OpenOffice.org plugin. We should have a separate Open Document Format plugin since this is likely to be used in more applications that OOo.
