20 [FOR-211] whole-site html and pdf: broken ext links	5
21 [FOR-210] whole-site html and pdf: broken link faq, broken image links	5
22 [FOR-201] Common template to add alternate views in docs	5
23 [FOR-197] Link for whole-site docs	5
24 [FOR-187] Redefine project documentation dirs	5
25 [FOR-185] Can't get svg files served along with the PNG	5

Note:

These are the open issues for our upcoming release listed in our <u>issue tracking system</u> (see <u>all</u> open issues). The listing below is regenerated on each Forrest run.

1. [FOR-394] html2document.xsl misses content before first h1 element

http://issues.cocoondev.org//browse/FOR-394

The html2document.xsl stylesheet does not transform content that precedes the first H1 element.

2. [FOR-388] Use plugins in-place if src available

http://issues.cocoondev.org//browse/FOR-388

At present Forrest will attempt to download plugins even if they are available in src form in the local filesystem as part of an SVN checkout.

- Bry Have Forrest mount plugins from designated directories in preference to downloading them wherever possible (need more than posible location for src plugins as some people may be developing their own plugins outside of Forrest)

- Bry Strain SVN checkout.

3. [FOR-379] Make plugin test a part of "build test"

http://issues.cocoondev.org//browse/FOR-379

Each plugin provides a "test" target in their build file. This target should be called for each plugin from forrests own test target (see main/build.xml, "testPlugins")
br>
This will result in all plugins being tested as part of the normal test process.

4. [FOR-354] Add plugin libraries to classpath

http://issues.cocoondev.org//browse/FOR-354

Some plugins (e.g. rtf) require additional libraries to be used. At present these need to be copied across to the forrest/main/webapp/WEB-INF/lib directory. It would be far better if the relevant lib directories of plugins were put on the classpath by the forrest execution scripts.

5. [FOR-343] Upgrading Plugins

http://issues.cocoondev.org//browse/FOR-343

Currently when installing a plugin Forrest attempts to install the most suitable version available. However, it makes no attempt to upgrade plugins when an upgrade becomes available.

br> We need a traget in the buildfile that will upgrade an indicated plugin when possible. This can then (optionally) be used when running Forrest to automatically upgrade plugins.

6. [FOR-342] [Patch] 'scale-dev' CSS enhancement for leather-dev

http://issues.cocoondev.org//browse/FOR-342

Shaun Evans escribió:
br> I do see your point - I will, instead of creating a new skin, try
br> playing with leather-dev and possibly making a patch to get the css
br> working well.

7. [FOR-341] Plugin resources are not copied to site

http://issues.cocoondev.org//browse/FOR-341

If a plugin contains some resources required in a statically built site (such as Javascripts) they are not copied across to build/site when "forrest site" is run

8. [FOR-340] plugin build file

http://issues.cocoondev.org//browse/FOR-340

A build file is required to aid the management of plugins, this build file should:

build the distribution version of one or more plugins
br> - update the plugins.xml file in forrestcore
br> - upload plugin distributions to their distribution server
br> - build the plugin documentation
br> - upload the plugin documentation to its web space
br> - upload the src documentation to the repository location
br>

9. [FOR-298] Revise the build system to remove relics which were prior to copyless method

http://issues.cocoondev.org//browse/FOR-298

There are some old targets in the build system that can be removed following the move to being "copyless". Some targets such as "copy-sitemap" have already had such parts removed, leaving them with a different purpose which doesn't match their name.

10. [FOR-284] 'error:' prepending problems

http://issues.cocoondev.org//browse/FOR-284

'error:' prepending, for site: and ext: links that were not found, causes problems.

 For example, if in xdocs/samples I have ext:dtd-docs, Cocoon will search for samples/ext:dtd-docs, which of course does not exist.

 @see declare-broken-site-links.xsl in teh core templates for more info.

11. [FOR-282] Custom search engines

http://issues.cocoondev.org//browse/FOR-282

It would be nice to be able to use other search engines than the two now provided (Lucene and Google). More info in the e-mail discussion at:

 http://issues.apache.org/eyebrowse/BrowseList?listName=dev@forrest.apache.org&by=thread&from=87

12. [FOR-277] investigate use of forrest-0.6-dev as webapp with Tomcat 5

http://issues.cocoondev.org//browse/FOR-277

13. [FOR-259] openoffice files can skip sections

 $\langle br \rangle$

http://issues.cocoondev.org//browse/FOR-259

Create an openoffice file with lines like this:

br> Heading 2
 Heading 3
 Heading 4

 Heading 2
 Str> Heading 2
 The last two lines are not translated into sections.

14. [FOR-247] Tigris *.css need cleanup to remove our local changes

http://issues.cocoondev.org//browse/FOR-247

We have made some local changes to our copies of the tigris *.css which actually need to go into an over-riding css. Also remove our license notice which was added by accident.
 http://marc.theaimsgroup.com/?l=forrest-dev&m=109169132601758

15. [FOR-241] forrest undoes entity resolution

http://issues.cocoondev.org//browse/FOR-241

If I have a url like this inside the XML source:

 http://sourceforge.net/sflogo.php?g

validate-xdocs fails because it wants the literal & to be typed out as
 & to be typ

instead. So I correct it to become:

 <a

 However, the generated HTML has the entity resolution UNDONE!:
 http://sourceforge.net/sflogo.php?g

br> This HTML fails validation as 4.01 transitional.

br> David Crossley adds:

 cbr>

There is a demonstration of the problem in the document
br>

src/documentation/content/xdocs/docs/dreams.xml
 The ampersand in the link element text is properly handled but
 the ampersand in the link href attribute is not.

16. [FOR-237] xml stylesheets unnecessary copied to deployed site

http://issues.cocoondev.org//browse/FOR-237

Why are forrest.css.xslt and skinconf.xsl copied over to the deployment location? They're not required there, and therefore should not be copied.

17. [FOR-232] skin fetching cleanup

http://issues.cocoondev.org//browse/FOR-232

Fix skin fetching. It's an ugly combination of XSL and unusual ant tasks. It's also broken in at least one way: you get a malformed URL exception if you try to use a skin that doesn't exist. It should instead just say it doesn't exist.

18. [FOR-229] SVG not converted to PNG

http://issues.cocoondev.org//browse/FOR-229

See <a

href="http://mail-archives.apache.org/eyebrowse/BrowseList?listName=dev@forrest.apache.org&by=thread&freed&f

19. [FOR-215] site.lucene name colaps with site.html request

http://issues.cocoondev.org//browse/FOR-215

Any link called site.html or site.pdf produce a loop on the search funcionality.

br>
 The reason is an internal request called cocoon://site.lucene a work around would be to choose another name for this internal request.

 But this means that a request called /index-creation.html would have the same problem.
 <

20. [FOR-211] whole-site html and pdf: broken ext links

http://issues.cocoondev.org//browse/FOR-211

In the the generated site.html all of the external links are broken (i.e. the href attributes are like ... error:#ext:forrest).

21. [FOR-210] whole-site html and pdf: broken link faq, broken image links

http://issues.cocoondev.org//browse/FOR-210

The " fresh-site" build from 'forrest seed site' reports some failures for faq.html and various missing images. Wonder if sitemap issue?

 tr>

22. [FOR-201] Common template to add alternate views in docs

http://issues.cocoondev.org//browse/FOR-201

The pdf, xml, etc links should be in the document itself for all skins, and be removed when printing. A common template would make all skins look consistent in this regard.

23. [FOR-197] Link for whole-site docs

http://issues.cocoondev.org//browse/FOR-197

It's difficult for our users to find out how to make a whole-site pdf.
 We should add an icon on the skins to download the whole-site pdf after accessing a page that explains that it's the *whole* site, and not just the page.

24. [FOR-187] Redefine project documentation dirs

http://issues.cocoondev.org//browse/FOR-187

We should finalize all discussions about where to put sources and extensions in the projects.

25. [FOR-185] Can't get svg files served along with the PNG

http://issues.cocoondev.org//browse/FOR-185

The sitemap does not allow to get a file that is in xdocs as .svg, thus preventing users from adding a link to it from a page that contains the png version.
