Note:

These are the top 25 open issues for the next release that are scheduled in our <u>issue tracking system</u> (see <u>all</u> open issues). The listing below is regenerated on each Forrest run.

1. [FOR-144] define new format for skinconf.xml

http://issues.apache.org/jira/browse/FOR-144

We are attempting to define a new extensible skinconf format. Here is one thread where the discussion is happening (there were some other threads leading up to that).

http://marc.theaimsgroup.com/?t=1083157591000

<

2. [FOR-713] HTML-to-document.xsl no longer generates an XDoc

http://issues.apache.org/jira/browse/FOR-713

html-to-document.xsl no longer converts content to an XDoc. Instead it renders converts documents to XDoc, instead it allows H1, H2 etc. elements to pass through.

seems to render correctly and in the single test case I have used it still renders correctly in PDF and Text format. However, this is a backward incompatible change that will break sites that use includes with XPath statements such as /section[@id="foo"] (sections are no longer created)

dr>

3. [FOR-591] MaxMemory needs increasing

http://issues.apache.org/jira/browse/FOR-591

Since the docs restructurng for the 0.7 release it has become necessary to increase the maxmemory to be able to build the Forrest site.
br> Does this indicate a memory leak?
br> Does someone have the tools to run some diagnostics?
br> (NB maxmemory has been increased in forrest.properties, if we resolve this issue it should be reduced again)

4. [FOR-588] Design new configuration system

http://issues.apache.org/jira/browse/FOR-588

We need a new config system for Forrest for various reasons: the initial config system was known to be limited; to enable the specification of multiple Forrest sites within a single instance of Forrest; to accommodate the changes brought about by forrest:views, themes, and plugins.

5. [FOR-572] run a memory profiler while forrest is operating

http://issues.apache.org/jira/browse/FOR-572

We need to run a memory profiler while forrest is operating.

6. [FOR-701] Missing locationmap entry gives poor error

http://issues.apache.org/jira/browse/FOR-701

If there is no locationmap entry for a resource we get a " resource not found" error. This is fine if it is the actual source file that is missing. However, now that we are using the LM to find other intermediate resources, such as stylesheets etc. it can be misleading.

br> We need to throw a meaningful error when when a resource cannot be found.

7. [FOR-654] Create Schema for XHTML2 subset

http://issues.apache.org/jira/browse/FOR-654

We need a RelaxNG schema for the subset of XHTML identified in:
 http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488330888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=11248948883088&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=11248948888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=11248948888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=11248948888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488888&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=112489488

8. [FOR-707] Document i18n features of Forrest

http://issues.apache.org/jira/browse/FOR-707

There is next to no documentation about i18n, just a pretty poor FAQ entry that points at an issue that has now been closed.

closed. <br

9. [FOR-630] Forrest strategy and direction

http://issues.apache.org/jira/browse/FOR-630

Topics for discussion gathered at ApacheCon EU 2005.

dr> wARNING: Only reply to the general theme of this

dr> topics list. Please create separate threads for

dr> each specific topic.

dr> Actually we should be using Jira for some of this.

dr> How about discussing on the mailing list, and

dr> putting summaries into Jira.

dr> I have the scraps of paper that Nicola Ken wrote.

dr> Photographs are in:

dr> <a

* [S] Documentation mismatch. Docs are distributed in
 various places: site, plugins, seed.

 *Block documentation for Cocoon (/Forrest).

 *[C] Pre-processing plugins.

 *Flow of the plugin process.
 blugins - locationmap / flow #? this line obscure #?
 *br> *br> *Memory profiling.

 *Better use of Jira.

 *Sl XHTML2 transition.

 *br> *[S] Live Forrest for Apache.
 (a configuration usecase)

 *br> *[S] New skins for views.

 *br> *Views ... body="true|false" head="true|false"

 *The *.ft files in a plugin (one-to-many).

 *br> *Move into Java -> 0.9.5 or when needed. #? no idea what #?

 *br> *[C] Content directory.

10. [FOR-675] upgrading to commons-jxpath-1.2.jar causes failures with linkrewriter protocols site: etc.

http://issues.apache.org/jira/browse/FOR-675

upgrading from commons-jxpath-20030909.jar to commons-jxpath-1.2.jar causes failures with linkrewriter protocols site: etc. This happens in both modes: 'forret run' and 'forrest'.

11. [FOR-711] Cache results from the Locationmap

http://issues.apache.org/jira/browse/FOR-711

Now that we are using the locationmap extensively it is showing up just how innefficient it is. The problem is that for the majority of requests there are multiple requests to the locationmap. We can make things much faster (especially on the first page request) by caching results in the locationmap.

I think a simple cache will sufice, lets just provide a static hashmap using the hint as a key and, of course, the location as the value.

If we test all locationmaps and find no result we should record that tere is no result in this hashmap. This will also be a good place to throw an exception so that Cocoon can better report such errors (see FOR-701)

12. [FOR-388] Use plugins in-place if src available

http://issues.apache.org/jira/browse/FOR-388

At present Forrest will attempt to download plugins even if they are available in src form in the local filesystem as part of an SVN checkout.

- Bry Have Forrest mount plugins from designated directories in preference to downloading them wherever possible (need more than posible location for src plugins as some people may be developing their own plugins outside of Forrest)

- Bry -

13. [FOR-742] trouble accessing unversioned plugin for a released version of Forrest, e.g. projectInfo

http://issues.apache.org/jira/browse/FOR-742

The plugin retrieval and deployment process are not quite correct. Recently the projectInfo plugin had its version number incremented and the "unversioned" plugin now relates specifically to 0.8-dev version. That prevents 0.7 from accessing the relevant plugin.

br> The solution is

discussed here:
 http://marc.theaimsgroup.com/?t=1131763283000

14. [FOR-735] PDF cannot be generated when running Forrest as a webapp

http://issues.apache.org/jira/browse/FOR-735

(At this point I didn't try this scenario step by step any more; basically it is what we did to setup the site, except that we copied our project data from forrest 0.6 before trying the pdf links)
br> - run forrest webapp to create an empty webapp
br> - configure Tomcat to run the webapp (we did it by creating a context descriptor and put it onder Tomcat's config directory)
br> - the pdf links give an error "Resource Not Found"

15. [FOR-490] serve multiple sites on a single Forrest instance

http://issues.apache.org/jira/browse/FOR-490

Nicola Ken Barozzi wrote:

dry > After that, it would be beneficial to be able to serve

dry > multiple sites on a single Forrest instance, so that we

dry > can have other projects join and

dry > have their site served.

dry dry christians point (seving multiple "sites" from one Forrest

dry instance) is important even without moving Forrest to a

dry live server (I'm +1 on this).

dry Right now we have various styleguides in Forrest and if

dry I need to run them at once I have to start Forrest/jetty

dry with different ports.

dry (From Thread "[RT] Serving Apache Forrest site from live Forrest"

dry on dev-list. Will add link later.)

16. [FOR-343] Upgrading Plugins

http://issues.apache.org/jira/browse/FOR-343

Currently when installing a plugin Forrest attempts to install the most suitable version available. However, it makes no attempt to upgrade plugins when an upgrade becomes available.
br>
We need a traget in the buildfile that will upgrade an indicated plugin when possible. This can then (optionally) be used when running Forrest to automatically upgrade plugins.

17. [FOR-284] link rewriting broken when linking to xml source views which contain site: links

http://issues.apache.org/jira/browse/FOR-284

When linking to *.xml files (e.g. to demonstrate a source file) then if that file contains "site:" or "ext:" links, then they are reported as broken, e.g. docs/site:dtd-docs

18. [FOR-241] character entities (e.g. ampersand) are expanded again for href or src attributes

http://issues.apache.org/jira/browse/FOR-241

If I have a url like this inside the XML source:

 http://sourceforge.net/sflogo.php?g</br>

instead. So I correct it to become:

href="http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?g</br/>

href="http://sourceforge.net/sflogo.php?group_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?g</br/>

| http://sourceforge.net/sflogo.php?g</br/>

| http://sourceforge.net/sflogo.php?g</br/>

| http://sourceforge.net/sflogo.php?g</br/>

| http://sourceforge.net/sflogo.php?g</br/>

| http://sourceforge.net/sflogo.php?g</br/>
| http://sourceforge.net/sflogo.php.g</br/>
| http://sourceforge.net/sflogo.php.g</br/>
| http://sourceforge.net/sflogo.php.g</br/>
| http://sour

br>
However, the generated HTML has the entity resolution UNDONE!:

 http://sourceforge.net/sflogo.php?g

 This HTML fails validation as 4.01 transitional.

 David Crossley adds:

There is a demonstration of the problem in the document
br>

src/documentation/content/xdocs/docs/dreams.xml
 The ampersand in the link element text is properly handled but
 the ampersand in the link href attribute is not.

19. [FOR-209] First level selected tab is not highlighted when containing 2nd level tabs

http://issues.apache.org/jira/browse/FOR-209

When there are two levels of tabs, the selected first level tab does not get highlighted, nor are there any other visual or structural clues as to which first-level tab is active, and which contains the displayed 2nd level tabs.

br> This is checked with both the default skin, and with tigris-style.

 try> chr>

20. [FOR-211] whole-site html and pdf: broken ext links

http://issues.apache.org/jira/browse/FOR-211

In the the generated site.html all of the external links are broken (i.e. the href attributes are like ... error:#ext:forrest).

21. [FOR-215] site.lucene name colaps with site.html request

http://issues.apache.org/jira/browse/FOR-215

Any link called site.html or site.pdf produce a loop on the search funcionality.

str>

an internal request called cocoon://site.lucene a work around would be to choose another name for this internal request.

br>

But this means that a request called /index-creation.html would have the same problem.

br>

clr>

22. [FOR-203] 2nd level tabs are not selected appropriately

http://issues.apache.org/jira/browse/FOR-203

The 2nd level tabs are not shown for menu entries that caused the issue FOR-111. This happens because the starts-with() path comparison fails for menu entries that do not reside the same directory as is specified in the "dir" attribute of the 2nd level tabs.

bug-demo.tgz for an example. Select "Samples/Apache document" and notice that the 2nd level tabs are shown. Now select "Samples/BUG DEMO" and notice that the 2nd level tabs are not shown.

 This is because the document corresponding to "Samples/Apache document" resides in the directory "/samples" whereas the document corresponding to "Samples/BUG DEMO" resides in the directory "/bug-sample".

 Kind regards,

 Lorenz Froihofer.

23. [FOR-184] Switch to XHTML2

http://issues.apache.org/jira/browse/FOR-184

Switch to using XHTML2 as a base and intermediate format. This means also using RelaxNG validations, new sitemap pipelines, new stylesheets, new input/output for "views". See the steps in thread: http://marc.theaimsgroup.com/?t=1125127358000

24. [FOR-187] Redefine project documentation dirs

http://issues.apache.org/jira/browse/FOR-187

We should finalize all discussions about where to put sources and extensions in the projects.

25. [FOR-157] skin-descriptors comma separated list fails

http://issues.apache.org/jira/browse/FOR-157

The second link does *not* read the url of the skin correctly.

sty>

I repeated today the steps with a second skin:
