# **Issues for this release**

# **Table of contents**

1 [FOR-500] ensure that all supporting libraries have a corresponding license	2
2 [FOR-528] Add version control to plugins	
3 [FOR-454] add content about major changes for this release	2
4 [FOR-391] website docs/site split	2
5 [FOR-241] character entities (e.g. ampersand) are expanded again for href or src attributes	3
6 [FOR-505] Allow the retrieval of raw html files	3
7 [FOR-465] Logging Error: Writing event to closed stream	3

#### Note:

These are the issues for this release that are scheduled in our <u>issue tracking system</u> (see <u>all</u> open issues). The listing below is regenerated on each Forrest run.

#### 1. [FOR-500] ensure that all supporting libraries have a corresponding license

http://issues.apache.org/jira/browse/FOR-500

Some old libraries and some of the recently updated libraries do not have an updated license file.

### 2. [FOR-528] Add version control to plugins

http://issues.apache.org/jira/browse/FOR-528

David Crossley wrote: <br/> <br/> <br/> &gt; Ross, are you able to explain what needs to happen with the plugins <br/> &gt; at release-time. I mean do they all need to have &quot;-0.7&quot; appended <br/> <br/> br> > to the names of the zip files? <br> <br> <br> Blast I forgot that entirely (again!). Yes we need two zipped versions, a pluginname-0.7.zip and a pluginname-0.8-dev.zip <br/> <br/>br> The system will then download the correct version for the currently installed version of Forrest. This will allow us to have a separate release cycle for plugins, if we deploy from a 0.8-dev version of Forrest then we will have the 0.8-dev zip file. <br/> <br/>br> However, now I write that down I don't like it because there is no distinction between a 0.1 version of a plugin for Forrest 0.7 and a 1.0 version of a plugin for Forrest <br/> We only allow \*-dev plugins in the current \*-dev branch of Forrest <br/>br> We can worry about the release process for plugins after this release (just get them out there for 0.7, we can blow the trumpet on subsequent upgrade releases) <br/> <br/>br> &gt; Do we need to add something to our RELEASE BOTES.txt file? <br/> <br/>br> <br/> <br/> Yes, a section on plugins with a link to the plugins page, I'll add to project-info plugin <br/> <br/>br> &gt; Does someone need to tweak the build file? <br> <br> Yes, leave it with me, I'll implement the above with whatever modifications people think we need. <br/> <br/>br> <br/> Ross <br/> <br/> (for follow ups see <a href="http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546807300&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546800&w=2">http://marc.theaimsgroup.com/?l=forrest-dev&m=111821546800&w=2">http://marc.theaimsgroup.com/?l=forr

## 3. [FOR-454] add content about major changes for this release

http://issues.apache.org/jira/browse/FOR-454

#### 4. [FOR-391] website docs/site split

http://issues.apache.org/jira/browse/FOR-391

Split our website into a standalone documentation site (which will be maintained per version/branch) and the main version-independent site.

#### 5. [FOR-241] character entities (e.g. ampersand) are expanded again for href or

#### src attributes

#### http://issues.apache.org/jira/browse/FOR-241

If I have a url like this inside the XML source:<br/><br/><a

href="http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?g-comics-grabber&type=1">http://sourceforge.net/sflogo.php.g-comics-grabber&type=1">http://sourceforge.net/sflogo.php.g-comics-grabber&type=1">http://sourceforge.net/sflo

instead. So I correct it to become: <br/> <br/> <a

href="http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php

href="http://sourceforge.net/sflogo.php?group\_id=comics-grabber&type=1">http://sourceforge.net/sflogo.php?g<br/>
<br/>
<br/>
This HTML fails validation as 4.01 transitional.<br/>
<br/>
br> Crossley adds:<br/>
There is a demonstration of the problem in the document<br/>
<br/>
transitional.

src/documentation/content/xdocs/docs/dreams.xml<br/>br> The ampersand in the link element text is properly handled but<br/>br> the ampersand in the link href attribute is not.

#### 6. [FOR-505] Allow the retrieval of raw html files

#### http://issues.apache.org/jira/browse/FOR-505

With the merging of the raw content directory and the xdocs directory it is no longer possible to retrieve the raw, unprocessed version of an HTML file.<br/>
- The raw HTML files were removed from the fresh-site in revision 178279. When we have added support for raw HTML files back into the system we should revive these files as a demo.

# 7. [FOR-465] Logging Error: Writing event to closed stream.

#### http://issues.apache.org/jira/browse/FOR-465

After doing 'forrest' there is a strange error message at the end of Cocoon's run:<br/>
&quot;Logging Error: Writing event to closed stream.&quot; This happens on every different project that i have tried.
