Note:

These are the top 25 open issues for the next release that are scheduled in our <u>issue tracking system</u> (see <u>all</u> open issues). The listing below is regenerated on each Forrest run.

1. [FOR-144] define new format for skinconf.xml

http://issues.apache.org/jira/browse/FOR-144

We are attempting to define a new extensible skinconf format. Here is one thread where the discussion is happening (there were some other threads leading up to that).

http://marc.theaimsgroup.com/?t=1083157591000
http://marc.theaimsgroup.com/?t=1083157591000

2. [FOR-591] MaxMemory needs increasing

http://issues.apache.org/jira/browse/FOR-591

Since the docs restructurng for the 0.7 release it has become necessary to increase the maxmemory to be able to build the Forrest site.

br/> Does this indicate a memory leak?

br/> Does someone have the tools to run some diagnostics?

(NB maxmemory has been increased in forrest.properties, if we resolve this issue it should be reduced again)

3. [FOR-675] upgrading to commons-jxpath-1.2.jar causes failures with linkrewriter protocols site: etc.

http://issues.apache.org/jira/browse/FOR-675

upgrading from commons-jxpath-20030909.jar to commons-jxpath-1.2.jar causes failures with linkrewriter protocols site: etc. This happens in both modes: 'forret run' and 'forrest'.

4. [FOR-588] Design new configuration system

http://issues.apache.org/jira/browse/FOR-588

We need a new config system for Forrest for various reasons: the initial config system was known to be limited; to enable the specification of multiple Forrest sites within a single instance of Forrest; to accommodate the changes brought about by forrest:views, themes, and plugins.

5. [FOR-427] Need licensing element in plugins.xml

http://issues.apache.org/jira/browse/FOR-427

Since plugins can be hosted on different sites they can be released under licenses other than the Apache one. We need an element in plugins.xml that records the type of license a plugin is released under. This element should be used by the plugin install process to verify that the user agrees to the terms of that license before download and installation is started.

6. [FOR-388] Use plugins in-place if src available

http://issues.apache.org/jira/browse/FOR-388

At present Forrest will attempt to download plugins even if they are available in src form in the local filesystem as part of an SVN checkout.

- Have Forrest mount plugins from designated directories in preference to downloading them wherever possible (need more than posible location for src plugins as some people may be developing their own plugins outside of Forrest)

8. [FOR-654] Create Schema for XHTML2 subset

http://issues.apache.org/jira/browse/FOR-654

We need a RelaxNG schema for the subset of XHTML identified in:

9. [FOR-701] Missing locationmap entry gives poor error

http://issues.apache.org/jira/browse/FOR-701

If there is no locationmap entry for a resource we get a "resource not found" error. This is fine if it is the actual source file that is missing. However, now that we are using the LM to find other intermediate resources, such as stylesheets etc. it can be misleading.
br/>
 We need to throw a meaningful error when when a resource cannot be found.

10. [FOR-572] run a memory profiler while forrest is operating

http://issues.apache.org/jira/browse/FOR-572

We need to run a memory profiler while forrest is operating.

11. [FOR-490] serve multiple sites on a single Forrest instance

http://issues.apache.org/jira/browse/FOR-490

Nicola Ken Barozzi wrote:

> After that, it would be beneficial to be able to serve

This last point (seving multiple "sites" from one Forrest

instance) is important even without moving Forrest to a

live server (I'm +1 on this).

Right now we have various styleguides in Forrest and if

I need to run them at once I have to start Forrest/jetty

with different ports.

12. [FOR-343] Upgrading Plugins

http://issues.apache.org/jira/browse/FOR-343

Currently when installing a plugin Forrest attempts to install the most suitable version available. However, it makes no attempt to upgrade plugins when an upgrade becomes available.
br/> We need a traget in the buildfile that will upgrade an indicated plugin when possible. This can then (optionally) be used when running Forrest to automatically upgrade plugins.

13. [FOR-277] investigate use of forrest-0.6-dev as webapp with Tomcat 5

http://issues.apache.org/jira/browse/FOR-277

Some people report having troubles running Forrest as a webapp under Tomcat. Needs investigation before 0.6 release.

14. [FOR-284] link rewriting broken when linking to xml source views which contain site: links

http://issues.apache.org/jira/browse/FOR-284

When linking to *.xml files (e.g. to demonstrate a source file) then if that file contains "site:" or "ext:" links, then they are reported as broken, e.g. docs/site:dtd-docs

15. [FOR-247] Tigris *.css need cleanup to remove our local changes

http://issues.apache.org/jira/browse/FOR-247

We have made some local changes to our copies of the tigris *.css which actually need to go into an over-riding css. Also remove our license notice which was added by accident.

16. [FOR-241] character entities (e.g. ampersand) are expanded again for href or src attributes

http://issues.apache.org/jira/browse/FOR-241

If I have a url like this inside the XML source:

 http://sourceforge.net/sflogo.php?g

validate-xdocs fails because it wants the literal & typed out as
br/> & amp;

instead. So I correct it to become:

 http://sourceforge.net/sflogo.php?g

However, the generated HTML has the entity resolution UNDONE!:

17. [FOR-209] First level selected tab is not highlighted when containing 2nd level tabs

http://issues.apache.org/jira/browse/FOR-209

When there are two levels of tabs, the selected first level tab does not get highlighted, nor are there any other visual or structural clues as to which first-level tab is active, and which contains the displayed 2nd level tabs.

 This is checked with both the default skin, and with tigris-style.

http://issues.apache.org/jira/browse/FOR-203

The 2nd level tabs are not shown for menu entries that caused the issue FOR-111. This happens because the starts-with() path comparison fails for menu entries that do not reside the same directory as is specified in the "dir" attribute of the 2nd level tabs.

22. [FOR-187] Redefine project documentation dirs

http://issues.apache.org/jira/browse/FOR-187

We should finalize all discussions about where to put sources and extensions in the projects.

23. [FOR-184] Switch to XHTML2

http://issues.apache.org/jira/browse/FOR-184

Switch to using XHTML2 as a base and intermediate format. This means also using RelaxNG validations, new sitemap pipelines, new stylesheets, new input/output for "views". See the steps in thread:
