Examples Built-With-Forrest

Table of contents

These are some of the sites that were created using Apache Forrest technology.

If you want your site added to the list, then please send a request to the mailing lists or to the Issue tracker. Tell us the URL, Name, and catch-phrase.

1. Skinned Sites

These sites use the skinning system that was part of all releases up to and including 0.7 release. This system is expected to be deprecated soon in favour of a more flexible system called Dispatcher. See the next section for some examples of such sites.

- Apache XML Project (xml.apache.org)
- Apache Forrest
- Apache Cocoon
- Apache Lenya
- The BeLux XML User's Group
- Anteater - Ant-based functional testing
- Chaperon - text parser
- IAS&CB
- Some Apache Committer personal pages
- Apache Incubator
- Apache FOP (Formatting Objects Processor)
- Dream Models - gather information about electric radio controlled helicopters
- Apache Stats (Vadim's Home Page) - some web statistics
- Krysalis Community Project
- Moerser Blechbläsertage
- Z-alarm - Ensure information server integrity
- Apache Jakarta POI
- Terra-International, Inc. (Japanese)
- Apache Jakarta POI (Japanese Translation)
- XFP - eXtensible Filtering Pipelines
- JIRA bugtracker documentation
- phpOpenTracker - A framework solution for the analysis of website traffic and visitor analysis
- Apache Web Services Project
- Apache WSIF Project - Web Services Invocation Framework
- Apache XMLBeans - An XML-Java binding tool
- Druid: The Database Manager - GUI tool to create databases (GPL)
- Apache Axis - an implementation of the SOAP ("Simple Object Access Protocol")
- Apache SOAP - an implementation of the SOAP submission
- Triathlon Northern Gauteng
- Kanaputs - an interpreter for Java
- Cell Electrophysiology Simulation Environment (CESE) - a framework for computational electrophysiological simulations
- Apache Jakarta Tapestry
- Apache Gump
- AG Software
- HiveMind - a services and configuration microkernel
- Core Computer Security Group
- PostgreSQL JDBC Driver
- SuperBonBon Industries
- Learn Linux - developing Free/Open Source GNU/Linux Training Materials

- [Computer Dictionary Project](#) - develop a DocBook XML computer nomenclature glossary database
- [Apache MyFaces](#) - open source JavaServer(tm) Faces implementation - MVC web application framework
- [Cañones Software Outfitter](#)
- [InWords](#)
- [TVersity - Diversifying Television](#) - a UPNP/AV compliant media server that can stream Internet videos to TV screens
- [Cirque|Digital, LLC](#)
- [Apache Derby](#) - a zero admin, embeddable java rdbms
- [ATbyMJM](#) - Assistive Technology, using augmentive communication devices, by Martha Jane McLellan
- [CCCP Common Clan Portal](#) - Primarily a J2EE website application for game clans
- [verit Informationssysteme GmbH](#)
- [Sello Propio](#) - Feng Shui in Columbia
- [Sámi proofing tools development project](#)
- [Sámi terminology portal](#) - (background documentation uses Forrest, the main page uses eXist+Cocoon)
- [varietee™ adjustable golf practice platforms](#)
- [DisCountDracula](#) - bargains/deals on various products and services
- [Central Florida Astronomical Society](#) - The Central Florida Astronomical Society, Inc. (CFAS) is a 501(c)(3) organization operating in the Greater Orlando Metropolitan area and surrounding communities.
- [uml2svg](#) - an XSLT-based tool for converting XMI-compliant UML Diagrams into SVG
- [technicat](#) - consulting and development expertise to the Internet, educational software, computer graphics and video game industries
- [OpenICDL](#) - training materials for International Computer Driving License certification
- [The Summit Journal](#) - A global, free, translated and syndicated Adventure and Exploration publication.
- [X'Prime](#) - Software company specialising in optimisation techniques using evolutionary algorithms
- [Snjezana Vidovic - Art Painter](#) - Virtual Gallery
- [j2world](#) - smart solutions for a mobile world
- [J2EE Quick Start](#)
- [Java Workshop](#) online web book - show cases some of the tools that every java developer should have in his / her toolbox
- [Die Krabbelkäfer](#) - homepage of the association for the promotion of child care in Usingen (Germany).
- [Cesar Nieto S.L.](#) - Meat-based products factory - customize skin using v0.7
- [Home of air trikes in British Columbia, Canada](#) - Open Skies Aviation Ltd. - ultralight aircraft
- [Produktkatalog for Sølvkroken](#) - biggest supplier of sports fishing equipment in Norway, with export all over the world.
- [Design Patterns](#) - GoF Design Patterns Tutorial
- [Generic Domain Names](#) - Domain sales site specialising in industrial, business and home themed generic domains.

2. Sites using upcoming Dispatcher

The skinning system in versions of Forrest up to and including 0.7 was great, however, it proved to be too inflexible. Soon we will have brand new system called Dispatcher. The following sites are examples.

> **Note:**
> The Dispatcher is still in development (as of 0.8-dev cycle), please only use them if you know what you are doing. We expect to include them in an upcoming release at which point we will be encouraging their use.

- Diwaker Gupta :: Web/Blog/Gallery
- Our Little Stars - A non-profit toy library site. This site is interesting because it pulls content from many locations including a Daisy CMS system and the Amazon ECS service.
- Cyriaque family website...
- Apache Lenya Zone - this site is using v2 with some nice demonstrations of new features like the theme switcher.
- tarGET-X - know the unknown by thorsten.
