Table with figures

Table of contents

This is already a more complex example. It uses tables, figures and text for tables as well as an initial descriptive paragraph (Comment in Excel File Properties).

1. Example table

There may be additional descriptive text at the beginning of each section.

You may add more than one paragraph and may use Excel features here like joining cells and line break for cells. Expecially useful if you write a lot of text. Just make sure your text starts in the second column.

This will become the Figure's caption

Reference	Name	Height	Comment
1	abc	12	this is a comment
2	def	24	another comment

Table 1: Example table

2. Some Shop

This is a mere Example and does not resemble the structure of any real world shop.

The screenshot was taken from the web.

Caption must be in column D!

Article	Price	Comment	Location
something	1	nope	store
anything	2	no comment	/home/user/store
what else	3	nothing	/root
what's up	4	nil	/tmp
	4.9		/dev/null

Table 1: Some Shop
